

HEPRR Recorded Webinars: preparedness and response essentials

ECSA-HC Secretariat | Regional (multi-country) | 2023-07

Executive summary

HEPRR Recorded Webinars — this webinar synthesises regional evidence on core competencies for health emergencies, identifies barriers and enablers, and sets out practical actions for member states. Intended for policymakers, programme managers and technical staff across the HEPRR MPA programme in Eastern and Southern Africa.

AT A GLANCE

- Pillar: Learning Centre
- Document type: Webinar
- Geographic focus: Regional (multi-country)
- Access: Open (CC BY 4.0)

1. Introduction

This webinar examines core competencies for health emergencies within the HEPRR MPA programme in Eastern and Southern Africa, framed for trainees. It situates the work within the goal of strengthening multisectoral preparedness, response and resilience to health emergencies.

2. Regional context

Health systems across the region face converging pressures — recurrent outbreaks, fragile supply chains, workforce gaps and climate-driven shocks. Evidence from country reporting and regional review shows wide variation in capacity on core competencies for health emergencies, and clear opportunities for shared standards, pooled resources and mutual learning.

3. Approach and methods

The analysis combines a situational review, stakeholder consultation and appraisal of existing regional instruments. Data were triangulated from national reporting, facility assessments and expert input convened by ECSA-HC and IGAD, and mapped to indicators in the HEPRR results framework (JEE/SPAR axes, 7-1-7 performance).

4. Key findings

Coordinated regional action on core competencies for health emergencies accelerates progress more efficiently than isolated national efforts. Early investors report stronger detection, faster response and greater community trust. Persistent barriers include financing continuity, data interoperability and workforce retention.

5. Recommendations and next steps

Recommendations: (1) institutionalise this work within national preparedness plans and budgets; (2) strengthen regional mechanisms for shared standards, data and procurement; (3) invest in the workforce and quality systems that sustain it; and (4) embed monitoring, evaluation and learning. ECSA-HC and IGAD will support member states through technical guidance, peer exchange and this open knowledge hub.
