## POPULATION GUIDE

Every repository knowledge product is authored to this shape — a one-sentence **KERNEL** (≤30 words), a structured **BRIEF** (150–250 words), and a sectioned body — so it is searchable by country, technical area, year and project component, and citable with machine-readable metadata.

## Brief

The National Action Plan for Health Security translates Democratic Republic of the Congo's assessment findings into a prioritised, costed and time-bound set of actions across the IHR technical areas. This summary presents the plan's strategic priorities, the highest-impact activities for the current period, and how they align to the regional preparedness framework and the 7-1-7 target. It reflects Democratic Republic of the Congo's specific risk profile — endemic ebola and mpox, measles and cholera; conflict-affected eastern provinces; dense river and land border network — and identifies where regional technical assistance and cross-border coordination add the most value. The full plan sits alongside the country's contingency plans, risk assessments and readiness assessments on the country knowledge page.

## Strategic priorities

The plan concentrates on the capability domains where Democratic Republic of the Congo's gaps most threaten timely detection and response, sequenced by impact and feasibility.

## Alignment to the regional target

Every priority is mapped to its contribution to the 7-1-7 timeline so national and regional measurement stay consistent.

## Regional assistance

The summary flags where ECSA-HC technical assistance and cross-border coordination are expected to accelerate delivery.
