

TRAINING MODULE · REGIONAL

Emergency Medical Teams (EMT) — Regional Training-of-Trainers Module

A complete ToT module that lets each country build and certify its own emergency-medical-team trainers.

POPULATION GUIDE

Every repository knowledge product is authored to this shape — a one-sentence **KERNEL** (≤30 words), a structured **BRIEF** (150–250 words), and a sectioned body — so it is searchable by country, technical area, year and project component, and citable with machine-readable metadata.

Brief

Emergency Medical Teams are the surge capacity a country deploys when local services are overwhelmed, and this module builds the trainers who build the teams. It is a full training-of-trainers package covering EMT classification and standards, deployment and coordination, clinical and IPC standards in the field, and the facilitation skills needed to teach adults effectively. Delivered as part of the regional EMT ToT for MPA countries, the module combines self-paced online content in the learning centre with a facilitated in-person practicum and a simulation exercise. On completion, certified trainers can run national EMT courses using the same materials, so that quality is consistent across the region and does not depend on flying in external experts.

EMT standards

The module teaches the WHO EMT classification and the minimum clinical, logistics and IPC standards a team must meet before deployment.

Facilitation skills

Trainers are equipped with adult-learning and simulation-facilitation techniques so that cascade training preserves quality.

Blended delivery

Self-paced online content is combined with an in-person practicum and a simulation exercise, ending in trainer certification.

ABOUT THE REPOSITORY

The Regional MPA Repository organises the programme's knowledge around six pillars — Regional Knowledge Hub, Country Knowledge Pages, Technical Knowledge Repository, Learning Centre, Best Practice & Innovation Portal, and the Regional Collaboration Portal — serving the 11 participating countries.
